Audit log

100+ connectors

THE PROBLEM

AI rollouts stall in IT & compliance

Your team wants to use AI — Claude, ChatGPT, Gemini — against your **own** tools and data: CRM, databases, internal apps, the document store.

But each integration is **weeks of custom code, hosting, auth, and a security review**. So the rollout stalls before it delivers value.

THE SOLUTION

A hosted gateway between your AI and your tools

Connector catalog

Add a tool in minutes, not weeks. 100+ pre-built; custom supported.

Credential vault

Keys & secrets encrypted at rest (AES-256), never exposed to the model.

SSO & access control

Who can use which tool, enforced. OIDC / OAuth2.

Full audit log

Every model → tool action recorded — clears IT & compliance review.

SEE IT LIVE

The product, not a promise

Workspace dashboard — connectors, usage and your live MCP endpoint at a glance.

Connector catalog — add databases, warehouses, REST & more in minutes.

One MCP endpoint — toggle exactly which tools your AI is allowed to see.

Tamper-evident audit log — every AI → tool action, exportable for compliance.

HOW IT WORKS

Four steps to governed AI

1

Connect your tools from the catalog (or add your own).

2

Store credentials once in the encrypted vault.

3

Point your AI assistant at the ApexMCP gateway.

4

Your team uses AI on real internal data — governed & logged.

Multi-tenant isolation, rate limits and quotas keep teams separated and usage in control.

Built for how Malta SMEs actually work

If you're a...	You can...
iGaming operator	AI on support, AML/KYC and player BI — every access logged & permissioned
Game studio / B2B platform	AI in dev, QA/game-math & certification docs — more output, audit intact
Fintech / payments / crypto	AI on compliance, AML & reconciliation — vault-secured, MLRO-ready audit
Software house / IT services	Use internally <i>and</i> resell a managed AI-integration layer to clients
Law / audit / corporate services	AI over documents, CRM & matter files — confidentiality & audit held

The window is open

- ✓ MCP standard (Anthropic, late 2025) now adopted across OpenAI & Google
- ✓ Every company is wiring AI into internal systems
- ✓ No managed, multi-tenant, compliance-ready MCP layer exists off the shelf
- ✓ Build it yourself — or use ApexMCP

Pricing

€49 · €299 · €999 · Enterprise

SaaS tiers with metered overage on tool-execution volume. Start small, scale per usage.

LET'S TALK

20 minutes — mapped to your stack

We'll show a live connector add and the audit log on your use case.
